

INFORMATION SECURITY POLICY

Hyundai Motor Turkey (HMTR) Management emphasizes the importance and need to implement security measures to protect information under the organization's responsibility. It is essential that necessary measures be taken to ensure that critical and vital company information is available to authorized users. The level of security achievable through technical means is limited and therefore must be supported by appropriate management, workflows, and procedures.

HMTR defines "Information Security" as protecting the confidentiality, integrity, and accessibility of information assets and information systems.

- **Confidentiality:** Ensuring that information is accessible only to authorized personnel.
- **Integrity:** Protecting the accuracy, integrity and timeliness of information and processing methods.
- **Accessibility:** Access to information and related assets is provided to authorized users on time and when necessary.

Confidentiality, integrity, and accessibility of information are among HMTR's primary objectives. To achieve the intended results, HMTR Management ensures compliance with the ISO 27001 Information Security Management Standard. From the initial stage to the final stage, all company units and other relevant parties will adhere to these principles in their operations. All HMTR personnel, including external personnel at all levels, fulfill information security system requirements and undertake activities to enhance the system's effectiveness.

HMTR implements processes related to the confidentiality and protection of personal data.

HMTR Management ensures compliance with all applicable legal obligations.

HMTR Management ensures the maintenance and management of continuous improvement and business continuity in terms of the Information Security Management System.
